

February, 2009

Benesure, the premier Canadian provider of independent credit protection for secured loans including the Mortgage Protection Plan (MPP), Credit Security Plan (CSP) and Encompass Home Service brands, has deployed BlueSun at the heart of a bold systems replacement project. Benesure took the courageous step of constructing their new systems architecture from scratch utilising 7 best-of-breed vendors, rather than purchase an integrated solution. The system covers new business, administration, compensation, accounting, claims and underwriting. At the heart of the systems strategy was the BlueSun administration system that linked to the other systems including Filenet, Aura, Thunderhead and Epicor. Tina Bellavia, VP Broker Product Management and Operations commented "We decided that we needed to bring our key service operations in-house to support our Broker Insured Service Strategy. This includes the ability to continually provide services to lenders, mortgage brokers and their clients that are measurably better than they were yesterday, and to support our future growth plans." Bellavia continued, "In selecting BlueSun, we looked for a vendor who would deliver to their promise – we had a tough, immovable deadline. We also looked for someone who would work in true partnership with us, someone who really understood our business and could deliver at a reasonable cost. BlueSun exceeded our expectations in all these areas. BlueSun provides us a very flexible platform on modern technology which will support our growth plans in the future."
